

FAHIM ALAM

New York, New York | (646) 704-2995 | fahimalam.work@gmail.com

SUMMARY

Software quality and automation professional with 7+ years of experience architecting scalable automation frameworks using Playwright, Selenium, and Leapwork. Led CI/CD integration in Azure DevOps, reducing regression cycles and improving release reliability across enterprise healthcare and financial platforms. Experienced in validating AI/LLM-generated outputs for enterprise tooling. Expertise in BDD, API automation, and automation-first test strategy within Agile environments.

TECHNICAL SKILLS

Automation & Frameworks: Playwright, Selenium WebDriver, Leapwork, ReqnRoll, SpecFlow, Cucumber, TestNG, Page Object Model (POM)

CI/CD & DevOps: Azure DevOps, Jenkins, Git, Maven

API & Testing Tools: Postman, Rest-Assured

Languages & Databases: Java, C#, TypeScript, Microsoft SQL Server, Oracle

PROFESSIONAL EXPERIENCE

Hitachi Solutions America
Senior Consultant – QA (SDET)

Irvine, CA
Jan 2022 – Present

Health Plans & Providers

- Led migration from **SpecFlow** to **ReqnRoll**, modernizing the BDD framework and improving long-term test maintainability.
- Architected a hybrid **Playwright** framework using **POM** and BDD, supporting parallel execution and multi-browser testing.
- Partnered with developers and product owners to define automation strategy for **SIT** and **UAT** phases.
- Drove cross-functional defect triage sessions, accelerating issue resolution and improving sprint predictability.
- Implemented .NET project builds, **Git** for code management, and **Azure DevOps CI/CD** for continuous integration.

Professional Services

- Designed and implemented **300+ automated regression tests** in **Leapwork**, reducing manual testing effort by **60%** and release cycle time by **30%**.
- Integrated automated tests into Azure DevOps pipelines, enabling nightly regression execution and early defect detection.
- Collaborated with cross-functional teams to devise test strategies leveraging Leapwork's low-code capabilities.

Manufacturing

- Enhanced test automation framework using **Cucumber** and **Selenium** to support parallel and multi-browser test execution.
- Wrote and maintained **SQL validation scripts** to verify data transformation outputs against expected results.
- Worked within **Agile** teams to align QA deliverables with sprint goals and release schedules.

Internal Innovation (AI-Powered QA Assistant)

- Validated **LLM-generated** test cases for accuracy, completeness, and alignment with acceptance criteria during alpha rollout.
- Identified hallucination patterns, edge cases, and formatting inconsistencies in **AI-generated** outputs, providing feedback to refine prompt templates.
- Verified Azure DevOps extension workflow, ensuring correct linking of generated test cases to parent user stories.

Capital One
Software QA Analyst

New York, NY
Nov 2019 – Dec 2021

- Enhanced Selenium-based framework, enabling parallel execution and increasing regression coverage by **40%**.
- Developed test cases, scenarios, and test data from user story analysis, integrating them into the automation suite. Collaborated with Agile development teams to ensure quality deliverables across sprint cycles.
- Authored SQL validation scripts to verify data outputs across the loan processing pipeline and executed **manual functional, regression, and exploratory testing** across the home loans platform, identifying critical defects prior to release.
- Documented detailed bug reports with steps to reproduce, severity, and expected vs. actual results, facilitating efficient developer turnaround.
