Fahim Alam

Solutions Engineer | Cloud Data Migration | Full-Stack Developer

Charlotte, NC | (646) 704-2995 | fahimalam.work@gmail.com | Portfolio

Summary

Engineer with nearly 5 years in enterprise software delivery, now working between Customer Success and Engineering at an AI SaaS company for law-enforcement and public-safety agencies. Own tenant onboarding, cloud data migration and sync, release regression and production triage on a multi-tenant, CJIS-sensitive platform, moving terabyte-scale data across AWS, Microsoft 365 and Google Workspace with zero data loss. At Hitachi Solutions, Ltd., cut manual effort by 60% and release cycle time by 30% through Azure DevOps CI/CD automation. Build and ship full-stack apps with TypeScript, React, Next.js, Python and .NET, and use Claude Code and Cursor agents to automate operations work.

Technical Skills

Area	Tools
Languages	Python, TypeScript, JavaScript (Node.js), C#, Java, SQL, Bash, HTML, CSS
AWS	S3 (versioning, lifecycle), EC2, ECS, SQS, EventBridge, DynamoDB, Textract, IAM/SSO, KMS, Secrets Manager, SSM Session Manager, AWS CLI
Microsoft and Google	Microsoft Graph API (change subscriptions, webhooks), SharePoint/OneDrive, Entra ID, Azure Functions, Google Drive API, service accounts, domain-wide delegation, Google Workspace admin
Web and backend	React, Next.js, Tailwind CSS, .NET 8/9 Web API, Entity Framework Core, REST APIs, PWAs
DevOps	GitLab CI/CD, Azure DevOps, GitHub Actions, Jenkins, Git, Docker, Pulumi, rclone, Vercel, Render, GitHub Pages, custom DNS

Area	Tools
Data	Microsoft SQL Server, Oracle, Supabase (Postgres), DynamoDB
AI and LLMs	Claude Code, Cursor, Anthropic Claude, OpenAI API, Groq API, LLM answer-quality evaluation, prompt engineering
Quality engineering	Playwright, Selenium, Leapwork, Reqnroll, SpecFlow, Cucumber, Jira Xray, Postman, Rest-Assured, BDD
Platforms and tools	Unreal Engine 5, Android (Kotlin, Jetpack Compose), Microsoft Dynamics 365, Jira (JQL, dashboards), Confluence, HubSpot, Intercom

Professional Experience

Solutions Engineer | Tranquility Inc.

Jun 2026 to Present | Charlotte, NC. AI SaaS platform (TimePilot) for police, sheriff, prosecutor and public-safety agencies. Role spans technical operations, cloud data migration, QA and Customer Success engineering.

Cloud data migration and sync

- Migrated 12 customer tenants to a new SharePoint tenant using runbook-driven rclone jobs on EC2 with exact file and byte reconciliation; the largest moved 88,290 files (1.07 TB) from 3 sources with zero discrepancies.
- Set up 12+ SharePoint and Google Drive sync integrations on a new cell-based architecture, wiring Microsoft Graph change subscriptions through an Azure Function relay; delta syncs up to 669 GiB and 51K objects finished with 0 errors.
- Traced an outage that stopped syncing for 22 tenants to an expired SharePoint refresh token, and shipped a fix that saves rotated tokens to Secrets Manager.
- Fixed a sync-service startup crash affecting every production cell, restoring syncs fleet-wide.

Tenant operations and QA

- Provisioned 25+ agency tenants (police, sheriff's offices, district attorneys, fusion centers) and offboarded 10+, including S3, KMS and integration cleanup.
- Found an apostrophe-in-tenant-name bug that broke HTTP headers and put 46 tenants at risk; reversed an accidental deletion of 933 S3 objects using versioning.
- Run weekly release regression and sign-off, per-tenant Playwright smoke tests, and a Jira Xray onboarding test plan.
- Triaged AI answer-quality reports (wrong citations, hallucinations, wrong-language output) with telemetry, separating model behavior from product bugs.

Customer Success tooling

- Built an HTML command center for the CSM team combining HubSpot, Jira and Intercom data across 62 customer domains, plus at-risk reports and a staffing model.
- Shipped a browser-only tool that autofills customers' security questionnaires (.docx) from a curated answer library.
- Wrote runbooks, customer IT setup guides for SharePoint and Google Drive, and 14 Confluence automation pages.

Senior Consultant, QA (SDET) | Hitachi Solutions, Ltd.

Jan 2022 to Jun 2026 | Irvine, CA (Remote). Promoted from SDET to Senior SDET to Senior Consultant.

Delivery and QA Leadership

- Lead QA on enterprise Microsoft Dynamics 365 projects, turning committed PBIs, user stories and acceptance criteria into test scenarios and cases.
- Plan sprint QA work in Azure DevOps, size workload and resourcing, and report dependencies, timelines and quality risks to project managers and Scrum Masters.
- Integrated automated runs into Azure Pipelines and published JUnit results to ADO Test Plans for central visibility of test outcomes.
- Developed a TypeScript record-and-play framework prototype that captures and replays browser interactions to simplify test creation.

Health Plans and Providers

- Led the migration from SpecFlow to Reqnroll, modernizing the BDD framework and improving long-term maintainability.
- Architected a hybrid Playwright and .NET 9 framework using Page Object Model and BDD, with parallel and multi-browser execution.

- Defined automation strategy for SIT and UAT phases with developers and product owners.
- Ran cross-functional defect triage, speeding issue resolution and improving sprint predictability.
- Set up .NET project builds, Git version control and Azure DevOps continuous integration.

Professional Services: IEHP (Leapwork)

- Built 300+ automated regression tests in Leapwork, cutting manual testing effort by 60% and release cycle time by 30%.
- Integrated the suite into Azure DevOps CI/CD pipelines for nightly regression runs and early defect detection.

Manufacturing: GlobalFoundries

- Extended a Cucumber and TestNG framework to support parallel, multi-browser execution.
- Wrote SQL validation scripts to check data transformation output against expected results.
- Shifted to functional testing on the D2P workstream as priorities changed, keeping coverage steady; recognized by the team for the contribution.

ALTA: QA Lead

- Served as QA lead, owning manual and functional test coverage for the project.
- Designed and launched the project's automation framework, setting the foundation for future automation.

ITA: Dynamics 365 Customer Engagement

- Built reusable Customer Engagement automation subflows and automated the full CE suite except two cases awaiting client re-verification.
- Diagnosed dispute-number generation failures and extended automation coverage to public portal scenarios.

Internal Innovation: AI-Powered QA Assistant

- Validated LLM-generated test cases for accuracy, completeness and fit with acceptance criteria during alpha rollout.
- Documented hallucination patterns, edge cases and formatting errors, feeding fixes back into prompt templates.

- Verified the Azure DevOps extension workflow that links generated test cases to their parent user stories.

Projects

BandarTrade | Founder

2026 to Present | bandartrade.com | Live AI-assisted freight quoting and port trading platform serving customers in Bangladesh | .NET 8, EF Core, SQL Server, React, TypeScript, OpenAI API, Playwright, Reqnroll

- As sole founder, built and launched a live platform for freight forwarding and port trade, evolved from two earlier prototypes (Smart Quoting Engine and Vela).
- Built an AI quoting engine that turns unstructured rate requests (e.g. "2x 40ft containers, Shanghai to Chittagong") into priced quotes by extracting origin, destination, container size and quantity with an LLM, then applying carrier rates, trucking costs and client markups.
- Handled edge cases: hallucinated ports not in the database, missing route rates and USD-to-BDT conversion.
- Built a React UI for quote review and approval, with English/Bangla toggle, audit log, user management and a chat assistant.
- Wrote the platform architecture and specs for supply chain visibility, vendor communication and transaction efficiency.
- Covered quote logic with Reqnroll BDD API tests and Playwright E2E tests; deployed a demo build through GitHub Actions.

Uplift Digital Partners | Co-founder and Technical Lead

Mar 2026 to Present | upliftdigitalpartners.com | HTML, CSS, JavaScript, EmailJS, GitHub Pages

- Co-founded a web agency that builds and modernizes websites and apps for local small businesses.
- Built and launched the company site on GitHub Pages with a custom domain, DNS migration and HTTPS.
- Created a conversational booking assistant with input validation that collects client details and preferred times.

- Automated owner and client confirmation emails with EmailJS and one-click Google Calendar invites with Google Meet links.
- Added SEO basics: sitemap, robots.txt, Open Graph tags and a branded 404 page.

Client websites built through Uplift

- **Sharif Adornment** (sharifadornment.com): jewelry boutique in Queens, NY. Searchable collections with filters, a page per piece for SEO and link previews, full-screen zoom, rental details and WhatsApp/Messenger enquiries. Dependency-free HTML, CSS and JS on GitHub Pages.
- **Hololand** (hololandbd.com): clothing brand in Bangladesh. GSAP hero, Three.js 3D lookbook, shop with WhatsApp checkout, and a bilingual English/Bangla AI stylist, size advisor and gift finder using Groq through a Cloudflare Worker, with offline fallbacks.
- **Mozumder** (mozumderbd.net): multi-page site for a logistics and transportation company in Chattogram, with a scroll-driven homepage film and 3D network map.
- **Maria's Closet** (maria-closet.vercel.app): rental storefront for South Asian outfits with a 3D garment carousel, availability checks, rental requests and an owner admin. Next.js, React Three Fiber, Tailwind, Supabase.
- **Seams of Safa** (seamsofsafa.vercel.app): storefront for a clothing label. Next.js with Sanity CMS, next-intl translations, React Three Fiber, Groq AI and Resend email.
- **Primé Cookie** (fahimalamwork.github.io/primecookie): bakery site built with Vite and Three.js, featuring an interactive "take a bite" hero with crumb particles and a waitlist.
- **GREY Cafe** (upliftdigitalpartners.github.io/GreyCafe): website for a women-owned cafe in Flushing, NY, with menu, photos, reviews, FAQ, hours and an open/closed indicator based on local time.

NearCoffee | Cafe Concept Website

2026 | nearcoffee.space | Vite, Vercel

- Built an immersive cafe experience in the browser: a converted barn below the Tetons, with lighting that matches the visitor's local time.
- Tuned Vercel cache headers so hashed assets are cached for a year while textures refresh weekly.

Tether | Web App for Couples

2026 | tether-us.vercel.app | Deployed on Vercel

- Designed, built and launched a web app for couples, owning product, UI/UX, brand identity and front-end state management end to end.
- Built a responsive interface and shipped it to production on Vercel.

Anima-Fy | Audit Planning Workspace

2026 | animafy-ai.vercel.app | React, Vite, Express, SEC EDGAR, XBRL, Groq, ExcelJS, Vercel

- Built an audit-planning workspace for any U.S. public company using free SEC EDGAR data, with Yahoo Finance as a fallback.
- Surfaces auditor's reports, critical audit matters, material weaknesses, restatements and late filings; rebuilds quarters with derived Q4 and benchmarks against industry XBRL percentiles.
- Generates Excel workpapers and an AI planning-memo draft, with preparer/reviewer sign-offs shared across team workspaces.

Night Walker NYC | Browser Game

2026 | three-js-brainstorm.vercel.app | Three.js, Vite, Vercel

- Built a cel-shaded, comic-style game set in New York neighborhoods, playable on desktop and phone, with walking, biking and driving.
- Generates all streets, buildings, traffic, crowds and sound in code, with a day-to-night cycle and subway travel between neighborhoods.

Never Forget | Escalating Reminder App

2026 | neverforget-timesheet.netlify.app | Node.js, Express, Web Push, Netlify Functions, PWA

- Built a weekly timesheet reminder that starts polite on Friday morning and escalates in frequency and tone until submission is confirmed.
- Delivers web push notifications from serverless functions, with streak tracking and a partner view.

LiveGrid | Real-Time Sports Analytics

2026 | livegrid.onrender.com | Deployed on Render

- Built and deployed a web app that tracks professional football statistics, historical scoring records, international player metrics and match analytics.
- Engineered the data pipelines and interactive front end behind the stats views.

Dishcover | Restaurant Answer Engine for Travelers

2026 | dishcover-two.vercel.app | Next.js, TypeScript, Tailwind, PWA, Google Places API, Groq LLM, Supabase, Vercel, zod

- Built a mobile-first PWA that shows 3 to 5 nearby restaurants by mood and budget, each with its most-praised dishes and prices.
- Uses an LLM to extract top dishes from review text, stored permanently in Supabase by place to keep API costs near zero; optional Halal, Kosher, vegetarian and vegan filters.
- Keeps API keys server-side, validates inputs and LLM output with zod, and includes a mock mode for testing without keys.

LiveScanner | Android and Android Auto App

2026 | Kotlin, Jetpack Compose, Media3, Android Auto

- Native Android app that streams 50+ live air-traffic control feeds and police/fire/EMS scanner feeds, sorted by distance.
- Supports background playback, lock-screen controls, favorites and Android Auto in the car.

Eat Your Way | Android Game

2026 | Unreal Engine 5.7, Android

- Building an Android game in Unreal Engine 5.7, themed around the food scenes of Jackson Heights and Flushing in Queens.

OkDoc | In-Network Doctor Finder (in development)

2026 | Next.js, TypeScript, Supabase, FHIR (Plan-Net), NPPES NPI Registry, next-intl

- Designing an app that answers "which doctors near me take my insurance," starting with Medicare Advantage plans in NYC.
- Syncs public CMS-mandated provider directory FHIR APIs and the NPI Registry into Postgres through payer adapters.

- Shows source and freshness labels on every result; built for 12 languages including right-to-left, to WCAG 2.2 AA.
